

Mihir Jayant

Cloud Engineer · Distributed Systems · Java · Node.js · Docker · PostgreSQL

United Kingdom | mihirjayant@hotmail.com | linkedin.com/in/mihir-jayant | github.com/MihirJayant

PROFILE

First Class Computer Science (Artificial Intelligence) graduate targeting a **cloud engineering** role on distributed, cloud-native platforms. Designed, containerised, and deployed a full-stack platform to the cloud (Render) with polyglot persistence across cloud-hosted PostgreSQL and MongoDB Atlas, JWT refresh-token rotation, and real-time Socket.io messaging — backed by 37 automated tests at a 100% pass rate. Built a cloud-native Java REST microservice on Azure Cosmos DB and stood up a 3-node Hadoop/HDFS cluster on Linux, giving first-hand experience of distributed infrastructure operations. Self-taught the full backend and cloud stack outside the curriculum.

TECHNICAL SKILLS

Cloud & DevOps Cloud deployment (Render), Docker containerisation, Linux command line, Git / GitHub, CI workflows, Agile / Scrum, automated unit & integration testing

Distributed & Backend RESTful API design, microservices, Service-Oriented Architecture, event-driven communication (Socket.io), multi-node Hadoop / HDFS / MapReduce, Node.js / Express.js, Apache Tomcat

Cloud Databases PostgreSQL (3NF design, indexing, ACID transactions), MongoDB Atlas, Azure Cosmos DB, Cassandra, MySQL — polyglot persistence

Languages Java (OOP, microservices), JavaScript / Node.js, Python, SQL

Security & Compliance JWT with refresh-token rotation, OAuth (Google), bcrypt, RBAC, OWASP Top 10 (Helmet.js, CORS, rate limiting), UK GDPR

SELECTED PROJECTS

Online Bidding System — Final Year Project

Oct 2025 – Apr 2026

[Node.js](#) • [Express.js](#) • [PostgreSQL](#) • [MongoDB Atlas](#) • [React](#) • [JWT](#) • [Socket.io](#) • [Render](#)

- Built and deployed an end-to-end full-stack platform to the cloud (Render): Node.js / Express REST backend, React frontend, and hybrid cloud-hosted PostgreSQL + MongoDB Atlas polyglot persistence.
- Implemented an immutable double-entry wallet ledger in PostgreSQL with ACID transactions and an event-sourcing pattern — balance derived by aggregation, full audit trail, the model that underpins real payment platforms.
- Engineered a layered security posture for GDPR-handled personal data: JWT refresh-token rotation, bcrypt, Google OAuth, RBAC, rate limiting, Helmet.js, CORS, and a single-transaction account-deletion endpoint (GDPR Art. 17).
- Delivered across 8 Agile sprints with a 37-test Jest suite (100% pass), API responses under 500 ms, and end-to-end UAT (10 users, 93.3% task completion).

CycleNest — Java REST Microservice

Oct 2025 – Apr 2026

[Java](#) • [Apache Tomcat](#) • [REST](#) • [JSON](#) • [MongoDB](#) / [Azure Cosmos DB](#) • [Git](#)

- Designed a Java RESTful orchestrator for a peer-to-peer marketplace on SOA principles — search, request, and cancellation endpoints over proper HTTP verbs with clean layer separation.
- Integrated cloud-hosted NoSQL storage (Azure Cosmos DB); tested end-to-end against 10,000+ record datasets through a Git review-style workflow.

Distributed Big Data on a Multi-Node Hadoop Cluster

Sep 2025 – Feb 2026

[Java](#) • [Hadoop](#) • [HDFS](#) • [MapReduce](#) • [Linux](#)

- Configured a 3-node Hadoop cluster on a virtualised Linux environment — inter-node communication, HDFS storage, and pre-submission health checks — hands-on distributed-platform operations.
- Wrote Java MapReduce jobs over the UK Road Safety dataset, validating aggregate counts before drawing conclusions.

EXPERIENCE

Apple Inc. — Technical Specialist

Jul 2025 – Present

[Leicester Highcross](#)

- Diagnose hardware and software faults under time pressure using structured fault-finding: gather symptoms, form hypotheses, eliminate causes.
- Ranked 2nd in team for Business Introductions; awarded Blue Orchid performance status; mentor new colleagues on troubleshooting.

Student Mentor — Nottingham Trent University

Jun 2023 – May 2026

- Mentored domestic and international undergraduates 1:1 and in groups on communication, time-management, and collaborative problem-solving.

EDUCATION & CERTIFICATIONS

BSc (Hons) Computer Science (Artificial Intelligence) — Nottingham Trent University

Sep 2023 – Jun 2026

[First Class Honours \(1st\)](#) • [Clifton Campus, Nottingham](#)

Cloud & distributed modules: Service-Centric and Cloud Computing (REST, SOA, cloud-hosted services); Distributed Database Engineering (Hadoop, MapReduce, HDFS, MongoDB, Cassandra); Information & Database Engineering (PostgreSQL).

Certifications: SQL for Data Science (UC Davis); Excel Fundamentals for Data Analysis (Macquarie) — Coursera, 2026.
